

Technical Skills:

Languages: Java, Python, JavaScript, TypeScript, C/C++

Frontend: React.js, Next.js, Angular, HTML5, CSS3, Tailwind CSS

Backend: Spring Boot, Node.js, REST APIs, GraphQL

Database and Tools: PostgreSQL, Oracle, NoSQL, Docker, Maven, Gradle, Git, AWS, Linux, Selenium, Cucumber

Experience:

Fannie Mae

July 2023 - Current

Software Engineer

Backend-focused full-stack engineer on 8-person team maintaining core microservices for Desktop Underwriter loan processing platform

- Maintained and enhanced Spring Boot microservices handling loan application routing and workflow logic, implementing comprehensive JUnit test suites to improve code coverage and catch regressions
- Developed Angular frontend interface for application health monitoring dashboard, providing operations team with real-time visibility into system performance and deployment status
- Conducted security vulnerability remediation and implemented bug fixes across multiple microservices, ensuring compliance with enterprise security standards
- Contributed to CI/CD pipeline improvements using Jenkins and AWS deployment tools, streamlining application deployment processes for the team

Fannie Mae

Summer 2021, 2022

Software Engineer Intern

Built full-stack loan application prototype from ground up as part of intern cohort program

- Designed and implemented complete loan application system from database design through frontend, starting with ER diagrams and progressing to full-stack TypeScript/React application
- Developed RESTful API backend using TypeScript to handle CRUD operations and HTTP requests, connecting to PostgreSQL database via custom SQL queries
- Built responsive React frontend with modern component architecture, implementing user workflows for loan application submission and processing
- Created application health monitoring system using Python, gaining experience that directly contributed to production health dashboard implementation in full-time role
- Implemented comprehensive testing strategy using Cucumber and Selenium for end-to-end test coverage, presenting final demo to engineering leadership

Projects:

Andalus Analytics

Fall 2022

Software Engineer

Joined a civic tech startup focused on building tools to improve transparency and citizen participation in local legislation

- Collaborated with senior developer to build React Native mobile application enabling direct citizen engagement with active legislation and elected representatives
- Implemented key UI components and features for bill summary display, user interaction workflows, and representative contact functionality
- Gained full-stack mobile development experience building application from ground up, including data integration for legislative bill tracking and constituent feedback systems

Not Your Average Halal Food

Spring 2021

Software Engineer

Developed custom web apps for a local food business, focused on enhancing online ordering and geolocation discovery.

- Built interactive restaurant discovery website using React and Node.js, featuring zip code-based search functionality to help users find local halal restaurants in the DMV area
- Integrated Mapbox API for geospatial mapping and location-based filtering, learning advanced mapping technologies and API integration from scratch with HTML/CSS background
- Achieved significant user engagement with 7,000+ monthly visits within first few months of launch, demonstrating ability to build applications that gain real-world traction

Education:

University of Maryland, Baltimore County

College of Engineering and Information Technology

Bachelor of Science Computer Science
